KX-TC157-B

(for U.S.A.)

Simplified

Cordless Phone

Please file and use this manual together with the Service Manual for Model KX-TC150-W order No. KM49607069C1 .
This Service Manual indicates the main differences between: Original KX-TC150-W and KX-TC157-B.

⚠ WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public.
It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product.
Products powered by electricity should be serviced or repaired only by experienced professional technicians.
Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

■ PARTS COMPARISON TABLE (Change from original pages 61~67)

KX-TC150-W

(for U.S.A.)

(KX-TC150R-W)

(KX-TC150H-W)

SPECIFICATIONS

General

Modulation:	FM, 5 kHz Deviation	Pause:	3.5 seconds per pause
Frequency Stability:	±2.5 kHz	Memory Capacity:	10 telephone numbers, up to 16 digits per station
Dial Type:	Tone (DTMF)/Pulse		
Redial:	Last dialed number each time the Redial button is pressed		

	Base Unit (KX-TC150H-W)	Portable Handset (KX-TC150R-W)
Power Source:	AC adaptor KX-A10 (DC 12 V)	Built-in rechargeable Ni-Cd battery (PQXA36ASVC)
(Receiver Section)		
Receiving Frequency:	25 channels within 48.76 to 49.97 MHz	25 channels within 43.72 to 46.97 MHz
Adjacent Channel Rejection:	40 dB	40 dB
Sensitivity:	1 dBμV for 20 dB S/N	2 dBμV for 20 dB S/N
(Transmitter Section)		
Transmitting Frequency:	25 channels within 43.72 to 46.97 MHz	25 channels within 48.76 to 49.97 MHz
Jacks:	DC IN, Telephone line	
Antenna:	Telescopic	Rubber Flexible
Speaker:	2" (5 cm) PM dynamic	1 ³ / ₁₆ " (3 cm) dynamic
Microphone:	Condenser microphone	Condenser microphone
Dimensions (H×W×D):	2"×4 ³ / ₄ "×8 ²⁵ / ₃₂ " (51×121×223 mm)	11 ¹ / ₁₆ "×2"×1 ¹⁵ / ₁₆ " (281×51×49 mm)
Weight:	0.66 lbs. (300 g)	0.46 lbs. (210g) with battery

**WARNING**

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

When you mention the serial number, write down all 11 digits. The serial number may be found on the label affixed to the bottom of the unit.

FOR SERVICE TECHNICIANS

ICs and LSIs are vulnerable to static electricity.

When repairing, the following precautions will help prevent recurring malfunctions.

1. Cover plastic parts boxes with aluminum foil.
2. Ground the soldering irons.
3. Use a conductive mat on worktable.
4. Do not grasp IC or LSI pins with bare fingers.

CAUTION

**Danger of explosion if battery is incorrectly replaced.
Replace only with the same or equivalent type recommended
by the manufacturer. Dispose of used batteries according
to the manufacture's instructions.**

LOCATION OF CONTROLS

STANDARD BATTERY LIFE

If your Panasonic battery is fully charged;

While in use (TALK)	Up to about 8 hours
While not in use (Stand-by)	Up to about 30 days

- Battery life may vary depending on usage conditions and ambient temperature.
- The battery cannot be overcharged.
- Clean the charge contacts with a soft cloth once a month, or the battery may not charge properly.
- Once the battery is fully charged, you do not have to place the handset on the base unit until the BATT LOW/PROG indicator flashes.

KX-TC150-W

CONNECTION

This connection is for U.S.A. version only.

Refer to the simplified manual (cover) for Canada or other areas.

- USE ONLY Panasonic AC ADAPTOR KX-A10.
- The AC adaptor must remain connected at all times. (It may feel warm during use. This is normal.)

OPERATIONS

NEW OPERATIONS

Making calls

- 1 Press **TALK**
 - The indicator lights.
 - If alarm tone sounds.
- 2 Dial a telephone number.
- 3 To hang up, press **TALK** or place the handset on the base unit.
 - The indicator light goes out.

OPERATING DISTANCE

To maximize the distance of the handset from the base unit.

If you misdial

Press **FLASH** firmly. → Dial again.

To redial the last number

press **TALK** → **REDIAL**.

To select the receiver volume HIGH or NORMAL (preset)

press **VOLUME/RINGER** while speaking.

- Each time you press, the volume level will change.

If noise interferes with the conversation

Press **CH** to select a clear one of 25 channels or move closer to the base unit.

New

NORMAL OPERATIONS

Answering Calls

TALK and
Indicator

VOLUME/RINGER

If the handset is off the base unit,
press **TALK**.

OR

If on the base unit,
just lift it.

Any Key Talk

You can also answer a call by pressing
any dialing button (0 to 9, *, #).

To select the ringer volume HIGH (preset) or LOW

Be sure the TALK indicator light is off. →
press **VOLUME/RINGER**.

•Each time you press, the bell sounds
and the ringer volume will change.

To turn the ringer OFF

Be sure the TALK indicator light is off. →
While pressing **VOLUME/RINGER**,
press **0** until 2 beeps sound.

To change the ringer to ON from OFF

Be sure the TALK indicator light is off. →
press **VOLUME/RINGER**.
•The ringer sounds at the HIGH level.

Storing Phone Numbers in Memory

The dialing buttons (0 to 9) function as memory stations.
The TALK indicator light must be off.

- 1 Press **PROGRAM**.
•The BATT LOW/PROG indicator
lights.
- 2 Enter a phone number up
to 16 digits.
- 3 Press **AUTO**.
- 4 Press a memory station
number (0 to 9).
•Confirmation tone sounds.
(See right side.)
•To store other numbers, repeat
steps 1 through 4.

If you misdial

press **PROGRAM** to end storing.
→Restart from step 1.

To erase a stored number

press **PROGRAM** → **AUTO** → the
memory station number (for the phone
number to be erased).

What the confirmation tone means

1 beep: The number is newly stored.
2 beeps: The number is same as
previously stored one.

Dialing a Stored Number

1 Press **TALK**.

2 Press **AUTO**.

3 Press a memory station number (0 to 9).

- The stored number is dialed.

Handset Locator

You can locate the handset or page a person at the handset with beep tones.

Press **HANDSET LOCATOR**.

- The handset beeps for 1 minute.
- The IN USE/CHARGE indicator flashes.

- To stop paging, press **HANDSET LOCATOR** again or press **TALK** on the handset twice.

Automatic Security Code Setting

Whenever you place the handset on the base unit, the unit automatically selects one of 65,000 security codes. These codes help to avoid unauthorized use of your telephone line by another cordless telephone.

For Call Waiting Service Users

Press **FLASH** lightly if you hear a call-waiting tone while speaking.

- The first call is put on hold and you can answer the second call.
- To return to the first caller, press **FLASH** again.

Temporary Tone Dialing (For Rotary Service Users)

Press **TOPE** before dialing.

- The dialing mode changes to tone. You can enter numbers to access the answering system or electronic banking services, etc. When you hang up, the mode returns to pulse.

If your Unit is Connected to a PBX

We recommend you press **PAUSE** between the access number for an outside line and the phone number.

Pressing **PAUSE** once makes a 3.5-second pause and prevents misdialing when you redial or dial a stored number.

ADJUSTMENTS (KX-TC150H-W)

If your unit have below symptoms, adjust each item using remedy column from the table.

Symptom	Remedy
The base unit dose not respond to a call from portable handset.	Make adjustments in item(A)
The base unit dose not transmit or the transmit frequency is off.	Make adjustments in item(B)
The transmit frequency is off.	Make adjustments in item(C)
The transmit power output is low, and the operating distance between base unit and portable handset is less than normal.	Make adjustments in item(D)
The reception sensitivity of base unit is low with noise.	Make adjustments in item(E)
The transmit level is large or small.	Make adjustments in item(F), (G)
The reception level is large or small.	Make adjustments in item(H)
The unit does not link.	Make adjustments in item(I)

Unit condltion:

Remove the antenna from P.C Board of the base unit.

How to set the test mode:

CH25 Test Mode

Set S1 to OFF(Power OFF)

While pressing S21, set S1 to ON.
After pressing S1 for 1second,
set S21 to OFF(unit becomes
CH25 talk test mode).

- Every time pressing S22, unit changes as follow.
Talk → Standby → Talk → Standby
- Every time pressing S21, unit changes as follow.
CH25 → CH1 → CH2 → CH3.....CH24 → CH25
- When setting S1 to OFF, unit releases from test mode.

When replacing these parts, adjust as shown in table below table.

Replace Parts	Adjustment items	Test Mode	Adjustment Point	Procedure
IC2, T3	(A) RX VCO Adjustment	CH25 Talk	T3	1. Set S1, S5 to ON. 2. Adjust T3 so that the reading of the Digital Voltmeter is $2.0V \pm 0.2 V$ (After adjusting, set S5 to OFF).
D1 ,D2, T5	(B) TX VCO Adjustment	CH25 Talk	T5	1. Set S1, S4 to ON. 2. Adjust T5 so that the reading of the Digital Voltmeter is $2.2 V \pm 0.2 V$ (After adjusting, set S4 to OFF).
DUP1, T2, TC1, X2	(C) TX Frequency Adjustment	CH25 Talk	TC1	1. Set S1, S6 to ON. 2. Adjust TC1 so that the reading of the frequency counter is $46.970 \text{ MHz} \pm 200 \text{ Hz}$ (After adjusting, set S6 to OFF).
T4, Q4	(D) TX Power Adjustment	CH1 Talk CH25 Talk	T4 VR104	1. Set S1, S7 to ON (S6, S8, S9 : OFF). 2. Adjust T4 so that the reading of the RF VTVM is peak level. 3. Adjust VR104 so that the reading of the RF VTVM is $230\text{mV} \pm 10\text{mV}$ (clock wise from peak) .

When replacing these parts, adjust as shown in table below.

Replace Parts	Adjustment items	Test Mode	Adjustment Point	Procedure
T1	(E) RX Sensitivity Adjustment	CH25 Talk	T1	<ol style="list-style-type: none"> 1. Set S1, S9, S10 to ON (S6, S7, S8 : OFF). 2. Apply a 40dB μ Vemf output from S.S.G. (modulation frequency 1kHz, dev. 3kHz). 3. Adjust T1 so that the reading of the RF VTVM is maximum output (10~40mV).
T2	(F) Line Output Maximum Adjustment	CH15 Talk	T2	<ol style="list-style-type: none"> 1. Set S1, S3, S9 to ON (S2 : OFF). 2. Apply a 40dB μ Vemf output from S.S.G. (modulation frequency 1kHz, dev. 3kHz), and adjust T2 so that reading of the AF VTVM is maximum output and turn T2 clockwise until the line output is 0.5dB down from peak.
VR102	(G) Line Output Level Adjustment	CH15 Talk	VR102	<ol style="list-style-type: none"> 1. Set S1, S3, S9 to ON (S2 : OFF). 2. Apply a 40dB μ Vemf output from S.S.G. (modulation frequency 1kHz, dev. 3kHz). 3. Adjust VR102 so that the reading of the AF VTVM is $-5\text{dBm} \pm 0.5\text{dBm}$ (600 Ω load) (distortion : less than 7%).
VR101	(H) Line Input Modulation Adjustment	CH15 Talk	VR101	<ol style="list-style-type: none"> 1. Set S1, S2, S8, S9 to ON (S3, S6, S7 : OFF). 2. Input via loop simulator 1.0kHz, -20.0dBm (measured at T-R) signal. 3. Apply a 40 dB μ Vemf output from S.S.G. (modulation frequency 1kHz, dev. 0kHz). 4. Adjust VR101 so that the reading of the FM Deviation Meter is $4.0\text{kHz} \pm 0.1\text{kHz}$.
VR103, IC2	(I) Carrier Sensitivity Adjustment	CH15 Talk	VR103	<ol style="list-style-type: none"> 1. Set S1, S9, S11 to ON (S6, S7, S8 : OFF). 2. Apply a 0dB μ Vemf output from S.S.G. (modulation frequency 1kHz, dev. 0kHz). 3. Adjust VR103 so that the oscilloscope becomes Low→High.

The connection of adjustment equipments are as shown in pages 13, 14.

■ FOR SCHEMATIC DIAGRAM [KX-TC150H-W (pages 17, 18)]

1. S1: Dialing Mode Selector Switch.
2. S2: Handset Locator Switch.
3. DC voltage measurements are taken with electronic voltmeter from negative voltage line.

This schematic diagram may be modified at any time with development of new technology.

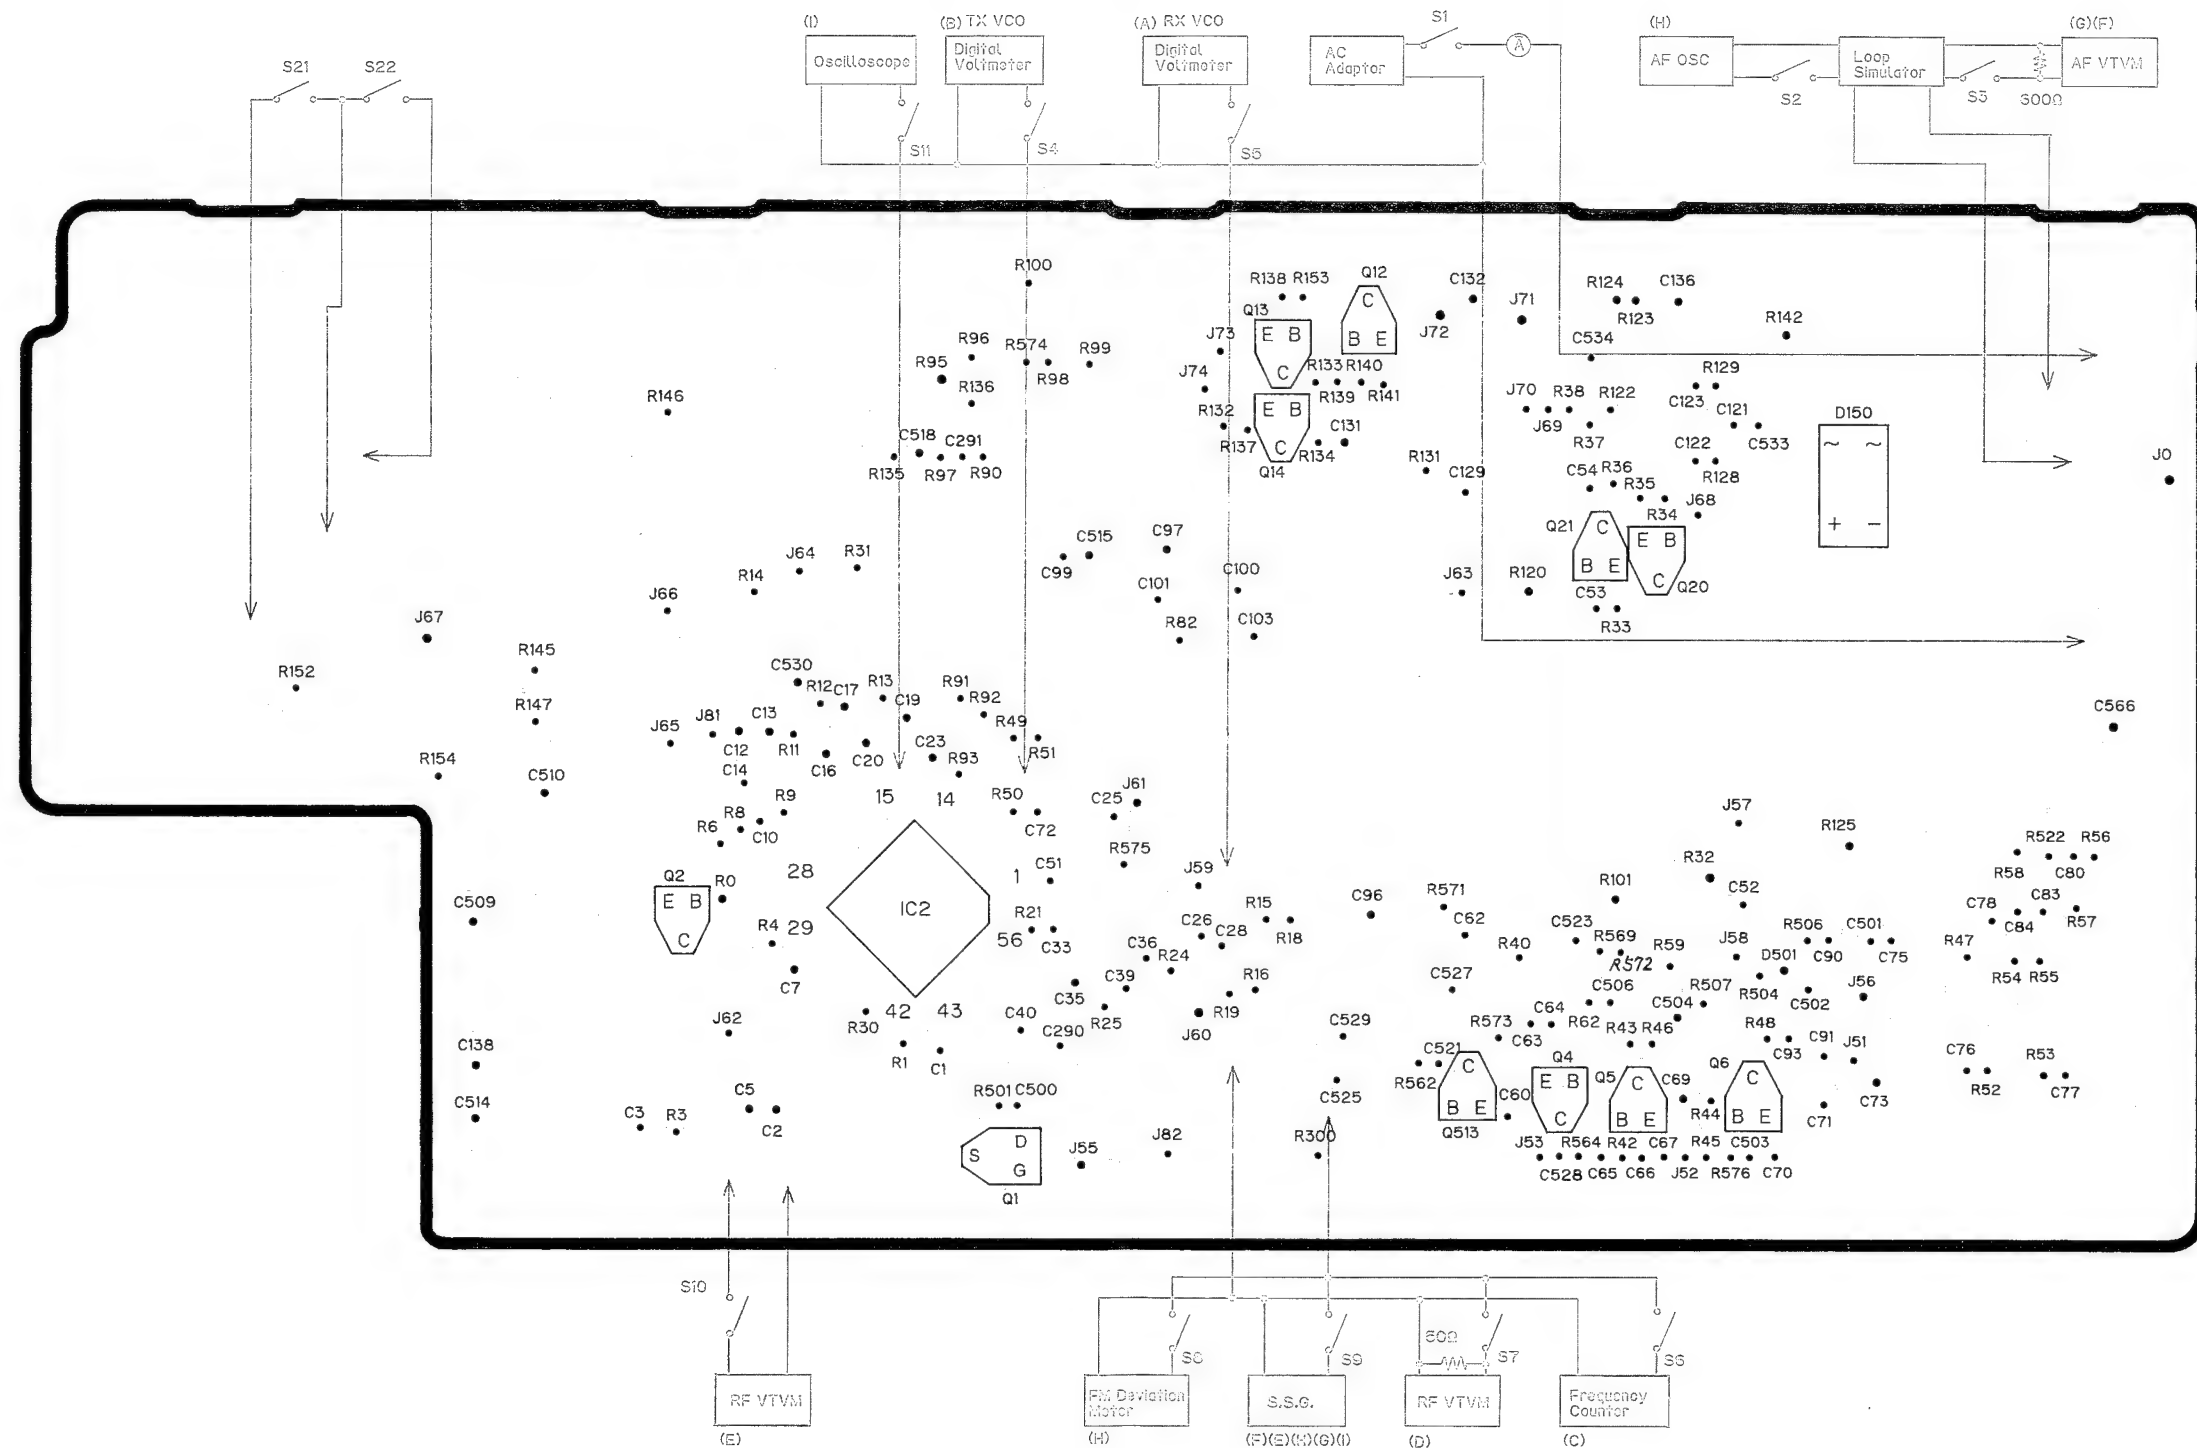

Important Safety Notice:

The shaded area on this schematic diagram incorporates special features important for protection from fire and electrical shock hazards.

When servicing it is essential that only manufacturer's specified parts be used for the critical components in the shaded areas of the schematic.

ADJUSTMENTS (KX-TC150R-W)

If your unit have below symptoms, adjust each item using remedy column from the table.

Symptom	Remedy
The movement of Battery Low Indicator is wrong.	Make adjustments in item(A)
The base unit dose not respond to a call from portable handset.	Make adjustments in item(B)
The base unit dose not transmit or the transmit frequency is off.	Make adjustments in item(C)
The transmit frequency is off.	Make adjustments in item(D)
The transmit power output is low, and the operating distance between base unit and portable handset is less than normal.	Make adjustments in item(E)
The reception sensitivity of base unit is low with noise.	Make adjustments in item(F)
Does not link between base unit and portable handset.	Make adjustments in item(G), (H)
The reception level is large or small.	Make adjustments in item(I)
The transmit level is large or small.	Make adjustments in item(J)

Unit condition:

1. Remove the antenna lead wire from P.C Board of portable handset.
2. Power Supply: DC 3.9V
3. Volume switch: HIGH
4. Speaker Load: 130 Ω

How to set the test mode.

CH10 Test Mode

1. After connecting the diode D33, and apply a power supply DC 3.9 V.
(The unit becomes CH25 Talk)
2. Press the talk switch.
(The unit becomes CH25 standly)
3. Press the Talk Switch.
4. Press the cannel switch,
CH25 → CH1 → CH2.....CH24

When replacing these parts, adjust as shown in table below.

Replace Parts	Adjustment items	Test Mode	Adjustment Point	Procedure
VR1	(A) Battery Low Adjustment	CH25 Talk	VR1	1. Set S1 to ON. 2. Set the power supply voltage to DC 3.57V, and adjust VR1 so that the reading of oscilloscope is High → Low.
IC1, TC1, X3, T13	(B) TX VCO Voltage Adjustment	CH25 Talk	T13	1. Set S2 to TX VCO side. 2. Adjust T13 so that the reading of digital voltmeter is $2.0 \text{ V} \pm 0.1 \text{ V}$ (After adjusting, set S2 to OFF).
IC1, TC1, X3, T3	(C) RX VCO Voltage Adjustment	CH25 Talk	T3	1. Set S2 to RX VCO side. 2. Adjust TC3 so that the reading of digital voltmeter is $1.5 \text{ V} \pm 0.1 \text{ V}$ (After adjusting, set S2 to OFF).
TC1, X3, IC1	(D) TX frequency Adjustment	CH25 Talk	TC1	1. Set S3 to ON. 2. Adjust TC1 so that the reading of frequency counter is $49.970 \text{ MHz} \pm 200 \text{ Hz}$ (After adjusting, set S3 to OFF).

KX-TC150-W

When replacing these parts, adjust as shown in table below.

Replace Parts	Adjustment items	Test Mode	Adjustment Point	Procedure
T11	(D) TX Output Adjustment	CH1 Talk	T11	1. Set S4 to ON (S3:OFF). 2. Adjust T11 for 200mV~350mV output on RF VTVM (50 Ω load) (After adjusting, set S4 to OFF).
T1, T3	(F)RX Adjustment (Speaker Output) (2nd IF Output)	CH1 Talk	T2 T4	1. Set S5 to ON (S3, S4: OFF). 2. Apply a 45 dB μ Vemf output from S.S.G. (modulation frequency 1 kHz, dev. 3kHz) 3. Adjust T2 so that the reading of AF VTVM is maximum output. 4. Apply a 45 dB μ Vemf output from S.S.G. (modulation frequency 1kHz, dev. 3kHz) 5. Adjust T4 so that the reading of RF VTVM is maximum output (15~36mV).
VR2	(G) Carrier Sensitivity Adjustment	CH25 Talk	VR2	1. Set S6 to ON. 2. Apply a 10 dB μ Vemf output from S.S.G.(modulation frequency 1kHz, dev. 0kHz) and adjust VR2 when oscilloscope becomes to low.
	(H) Data Moudulation of Confirmation	CH25 Talk	—	1. Set S3 to ON. 2. Keep pressing the flash button. 3. Confirm for a 5.5~8.5 kHz FM Deviation Meter reading.
VR102	(I) Speaker Output Levle Adjustment	CH25 Talk	VR102	1. Set S5 to ON. 2. Apply a 40 dB μ Vemf output from S.S.G.(modulation frequency 1kHz, dev. 3kHz). 3. Adjust VR102 so that the reading of AF VTVM is -29dBm. (distortion: less than 6%) (volume: normal)
VR101	(J) MIC Modulation Factor Adjustment	CH1 Talk	VR101	1. Set S3, S7 to ON. 2. Apply a MIC signal (1kHz, -40 dBm at 600 Ω load). 3. Adjust VR 101 so that the reading of FM Deviation Meter is 2.5kHz \pm 0.1kHz.

The connections of adjustment equipments are as shown in pages 23, 24.

HOW TO CHECK THE PORTABLE HANDSET SPEAKER

1. Prepare the digital voltmeter, and set the selector knob to ohm meter.
2. Put the probes at the speaker terminals as shown in Fig. 6
- 3.

Fig. 6

EXPLANATION OF CPU DATA COMMUNICATION

1. Standby → TALK

- A. The base unit continuously scans the portable handset's TX frequencies of the 10 original channels (a). Also, the base unit scans the portable handset's TX frequencies of the 15 new channels (b), until a vacant (b) channel is found.
- a. The base unit stores the number of the vacant (b) channel, and the status of all 10 (a) channels into memory.
- [1] When the user pushes the TALK button, the portable handset sends a TALK-ACK request to the base unit. [on the portable handset's (a) TX frequency]
- [2] The base unit sends an ACK-OK to the portable handset. [on the base unit's (a) TX frequency]
- a. This ACK-OK includes the number of the 2 vacant channels.
One vacant (a) channel and the vacant (b) channel selected and stored in step Aa.
- [3] The portable handset checks the portable handset's RX frequency of the vacant (b) channel selected & stored in step Aa. If this channel is vacant, then the portable handset proceeds to step 4a. If this channel is not vacant, then the portable handset proceeds to step 4b.
- [4] a. The portable handset sends a TALK-COMMAND. This TALK-COMMAND includes the number of the vacant (b) channel selected and stored in step Aa. This TALK-COMMAND is sent on the handset's (a) TX frequency.

After sending the TALK-COMMAND, the portable handset changes to the vacant (b) channel. Then, the base unit seizes the telephone line and changes to the vacant (b) channel.

- b. The portable handset sends a TALK-COMMAND. This TALK-COMMAND includes the number of the vacant (a) channel selected in step 2a. This TALK-COMMAND is sent on the handset's (a) TX frequency.

After sending the TALK-COMMAND, the base unit seizes the telephone line. [The base unit and portable handset have been communicating on an (a) channel since step 1. Therefore they both remain on that (a) channel]

- [5] A dial tone is heard.

Notes:

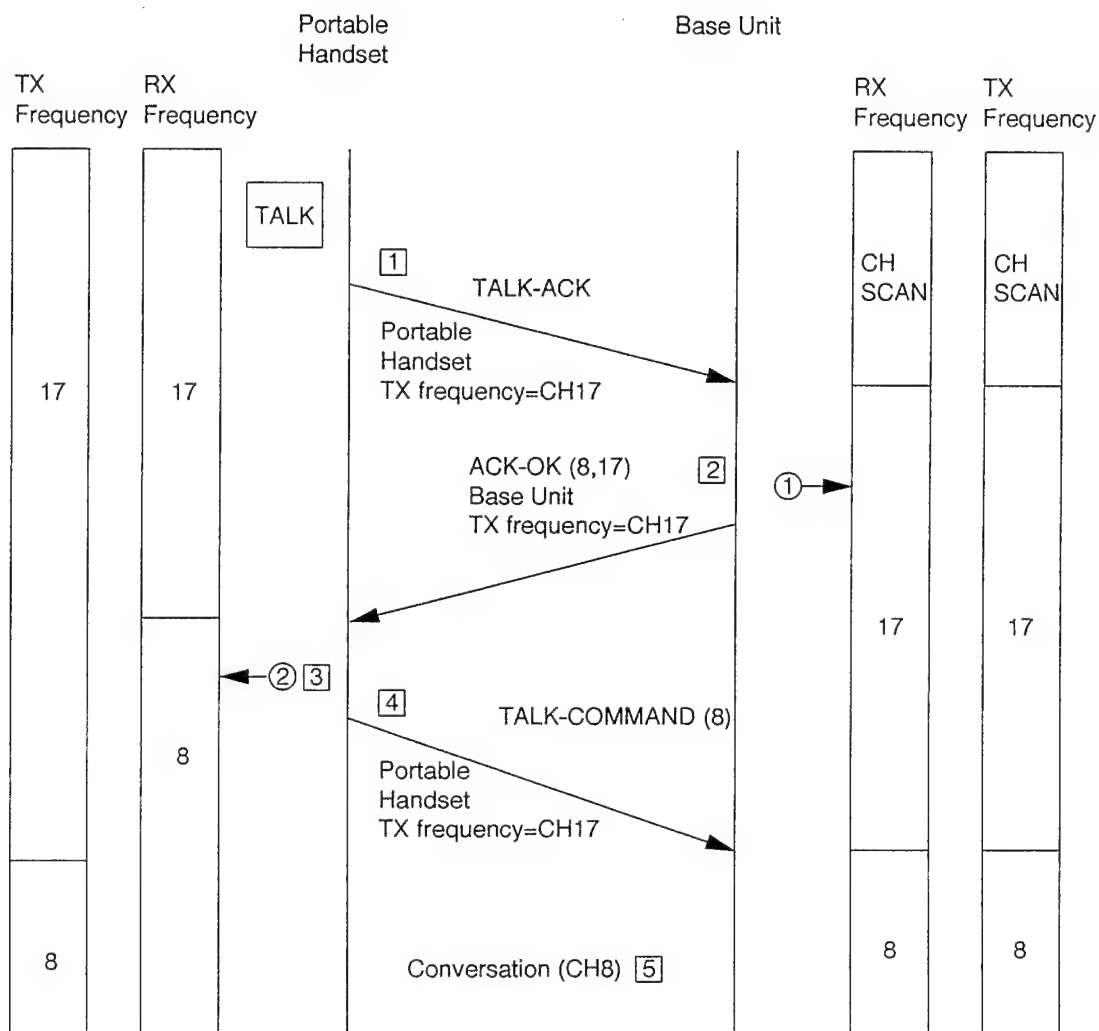

All data communication between the portable handset and base unit is done on one of the (a) channels prior to completing the link in step 5.

- (a) - channels 16-25 (old) - these channels are paired, as per FCC requirements
(b) - channels 1-15 (new) - these channels are paired, as per the manufacturer's choice

KX-TC150-W

OUTGOING CALL MODE (STANDBY → TALK):

- ex) Base Unit : Select channel (b) is vacant ①
 Portable Handset : Select channel (b) is vacant ②

- ① When the base unit is scanning, the base unit's RX frequency CH8 is vacant. The base unit sends an ACK-OK, which includes the numbers 8 and 17.
- ② The portable handset checks the portable handset RX frequency CH8. The RX frequency CH is vacant. The portable handset sends TALK-COMMAND, which includes the number 8.

Note: Channel (a) 16-25
 Channel (b) 1-15 (New Channel)

OUTGOING CALL MODE (STANDBY → TALK):

- ex) Base Unit : Select channel (b) is vacant ①
 Portable Handset : Select channel (b) is occupied ②

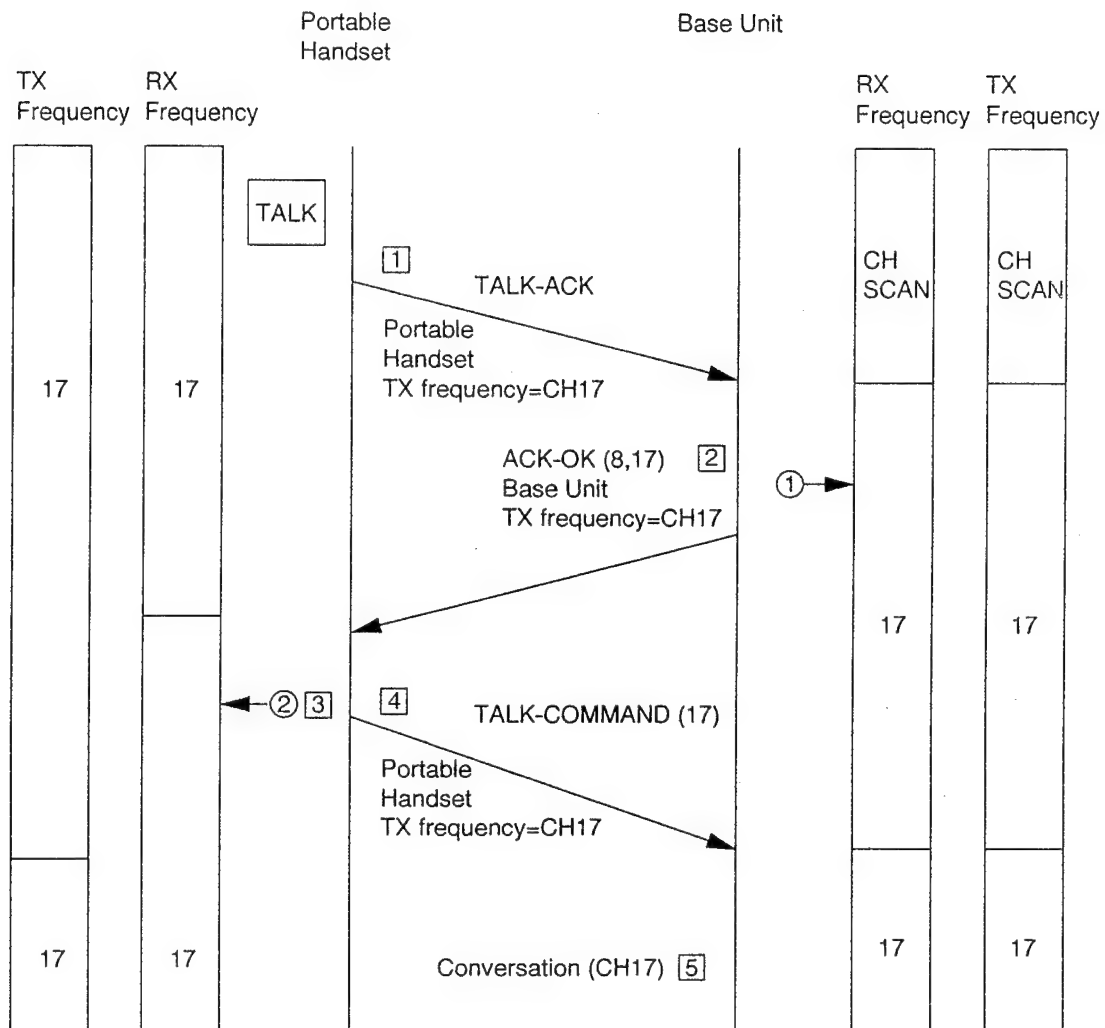

- ① When the base unit is scanning, the base unit's RX frequency CH8 is vacant. The base unit sends an ACK-OK, which includes the numbers 8 and 17.
- ② The portable handset checks the handset RX frequency CH8. The portable handset RX frequency CH8 is occupied. The portable handset doesn't use CH8. The portable handset sends TALK-COMMAND, which includes the number 17.

Note: Channel (a) 16-25
 Channel (b) 1-15 (New Channel)

KX-TC150-W

OUTGOING CALL MODE (STANDBY → TALK):

ex) Base Unit : All of channel (b) is occupied ①

- ① When the base unit is scanning, the base unit's RX frequency Channel (b) is vacant. The base unit sends an ACK-OK, which includes the number 17 only.
- ② The portable handset does not check the handset RX frequency. The portable handset sends TALK-COMMAND, which includes the number 17.

Note: Channel (a) 16-25
Channel (b) 1-15 (New Channel)

CH CHANGE MODE:

ex): (CH6 → CH8)

- ① When the user pushes the CH button, the portable handset sends a CH-ACK request to the base unit. (on the portable handset's conversation frequency)
- ② The base unit checks the base unit's RX frequency of the vacant (b) channel selected at random.
- ③ The base unit sends a ACK-OK.
This ACK-OK includes the number of the 2 vacant channels.
One vacant (a) channel and the vacant (b) channel selected in step 2.
- ④ The portable handset checks the handset's RX frequency of the vacant (b) channel in step 2.
- ⑤ The portable handset sends a CH-COMMAND.
This CH-COMMAND includes the number of the vacant (b) channel.
After sending the CH-ACK, portable handset changes to a vacant (b) channel.
- ⑥ The base unit changes to the vacant (b) channel.
The a conversation can be accessed.

Note: (a) - Channels 16-25 (Old)
(b) - Channels 1-15 (New)

KX-TC150-W

2. To terminate Communication

3. Ringing

After detecting the Ring signal from circuit, Base Unit sends a ring signal DATA (Ring) on the base's (a) TX frequency, then the Portable Handset starts ringing.

Note: (a) is channels 16-25 (old)---these channels are paired as per FCC requirements.

4. Ports for transmitting and receiving of data

Portable Handset : transmitting ... 23 Pin receiving ... 28 Pin

Base Unit : transmitting ... 31 Pin receiving ... 14 Pin

5. Waveform of DATA used for cordless transmission and reception

The DATA which is transmitted from the Portable Handset to the Base Unit is combination of DATA 0, DATA 1, DATA Delimt, Pre data and End data of P1.

The DATA which is transmitted from the Base Unit to the Portable Handset is combination of DATA 0, DATA 1, DATA Delimt, Pre data and End data of P2.

PORTABLE HANDSET

Transmitting DATA Format

DATA 0

DATA1

DATA Delimt

Pre data

26.933 ms

END data

BASE UNIT

Transmitting DATA Format

DATA 0

DATA1

DATA Delimt

Pre data

19.77 ms

END data

6. When LINKing

When LINKing from the Portable Handset (when becoming STBY to TALK), DATA is transmitted in above format. The combined portion of DATA 0 and DATA 1 is transmitted in LINK requesting DATA(27bit) format first. Then, when LINK OK(ACK-OK) DATA (23bit) is returned from the Base Unit, it is sent as LINK from DATA after changing the combination of DATA 0 and DATA 1. And the DATA Delimt is between each Frame as a stop.

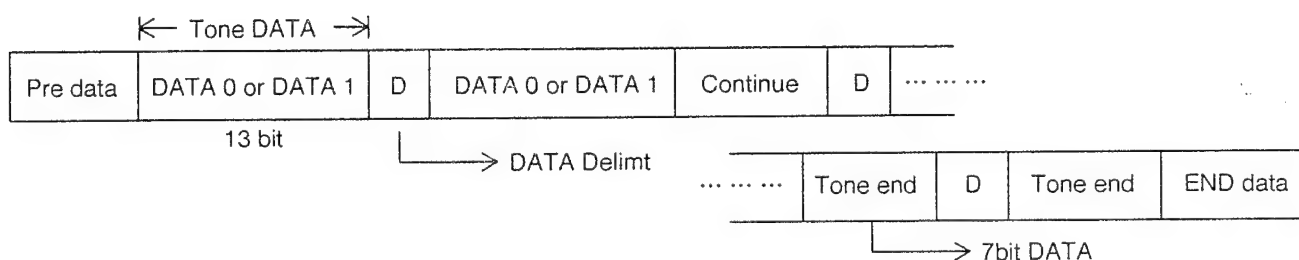

The contents of LINK requesting DATA and LINK from DATA are different depending on each operation.

7. Pulse Dial

When executing Pulse Dial, the Pulse Dial DATA is transmitted from the Portable Handset to the Base Unit in above format. The combination of DATA 0 and DATA 1 are changed by each Dial No. And the DATA Delimt is between each Frame as a stop. The number of Frame is 2.

8. Tone Dial

When executing Tone Dial, Tone Dial DATA is transmitted from the Portable Handset to the Base Unit in above format. The DATA is changed by Dial No. as same as Pulse Dial. When Tone Dialing, DATA (Continue DATA) that the key is pressed continuously is sent to the Base Unit during the key is pressed. When depressing the key, the TONE Dial exterminating DATA (Tone end DATA) is send, and the END data is sent finally.

NOTE

65,000 kinds of the security code are available for the model KX-TC150-W. Each time the portable unit is set on the cradle of the base unit (for charging), the CPU automatically change the security code.

NEW CIRCUIT OPERATION (KX-TC150H-W)

■ TRANSMITTER CIRCUIT

The voice signal or data signal sent to the portable handset is applied to the cathode and the anode of variable capacitor diode D2, as shown in below Fig. 25.

The transmitter frequencies 43~44 MHz band (CH1~CH15) and 46 MHz band are selected by block ① circuit.

- (1) CH1~CH15: Pin 10 of IC1 becomes high and the switching circuit goes on.
Then C502 (8pF) is added to the TX VCO circuit and becomes the 43~44 MHz band oscillator.
- (2) CH16~CH25: Pin 10 of IC1 becomes low, and the switching circuit goes off.
C502 is not added to the TX VCO circuit and becomes the 46 MHz band oscillator.

Circuit Diagram

■ TRANSMITTER OUTPUT AMP CIRCUIT

The signal which is oscillated at TX VCO, is amplified by buffer amp (Q4, T4, C527, C529) of 48~49 MHz band width. It is amplified again by amplifier Q513 (L13 load). The gain of Q513 is adjusted by VR104. The signal passes through DUP1 and is radiated from the antenna.

Circuit Diagram

NORMAL CIRCUIT OPERATION (KX-TC150H-W)

■ TELEPHONE LINE INTERFACE

Circuit Operation:

● ON HOOK

Q9 is open, Q9 is connected as to cut the DC loop current and to cut the voice signal. The unit is consequently in an on-hook condition.

● SPECIFICATIONS

In the on-hook state (idle), the current flows between the telephone line and the unit is as follows:

T → C126 → R130 → PC1 → R

The DC component is blocked by C126: thereby providing an on-hook condition.

The AC interface impedance is over 47 kΩ; thus, satisfying the telephone company requirements.

■ TELEPHONE MODE OPERATION

When a ring signal enters from the Line

- 1) The ring detection circuit, i.e., the photocoupler PC1, begins to operate and its output is input to Pin15 of IC1 (CPU).
- 2) To show the arrival of the ring signal to the portable handset, Pin 30 of IC1 enters into the transmit mode thus becoming a High and the ring data having the code set by Pin 31 of IC1 is sent to portable handset as a modulated output signal.
- 3) Upon receiving the ring data, and the portable handset is switched from standby to the talk mode, the base unit receives a carrier modulated by the data indicating a switch from standby to talk. This data is then demodulated at the base unit and passes through a data signal amplifier of IC2. This signal is then inputted to Pin 14 of IC1, via Pin 41 of IC1 which causes Q9 and PC2 to release the muting, and enable talk.

Circuit-making from the portable handset

- 1) When the operator of the portable handset presses the talk button, data is transmitted the base unit, this data is then demodulated by the base unit and passed through data signal amplifier of IC2 and enters Pin 14 of IC1.
- 2) When the codes coincide, Pin 41 of IC2 becomes a "High". At this time the transmit condition is enabled and the photocoupler PC2 is turned on.
- 3) Further, and IN USE signal is sent out from Pin 34 of IC1, thus dimly lighting the IN USE/CHARGE LED (D21).

Circuit Diagram

TRANSMITTER SIGNAL CIRCUIT

Circuit Operation:

1. The signal input from TEL LINE goes through tel line interface trans TL1 → C121, R128 and C122 → Pin 28 of IC2 Amp → LIMITER, COMPRESSOR, and is output from Pin 22 of IC2.
2. The signal output from Pin 22 passes through C530 and R11, and is input to modulator circuit.

Circuit Diagram

RECEIVER RF IF CIRCUIT

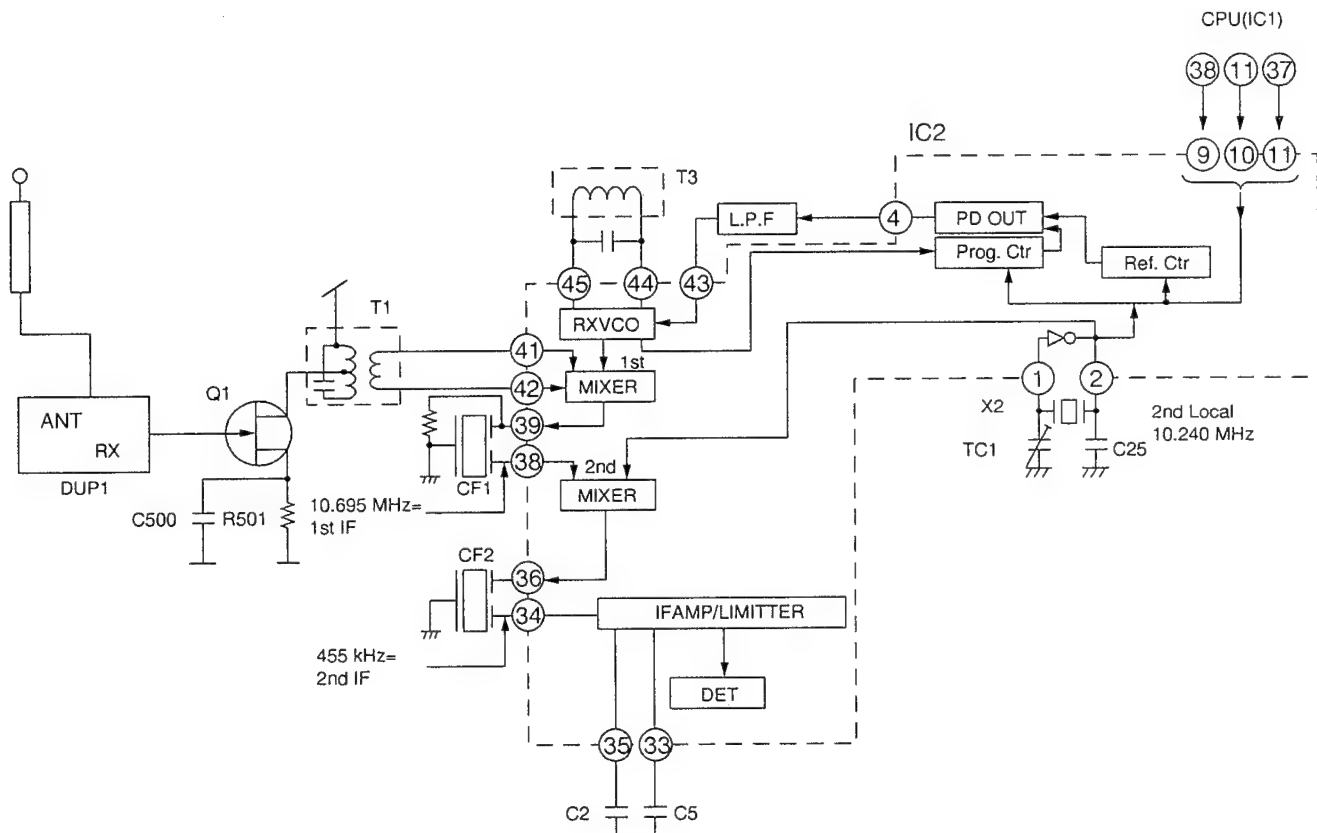

Circuit Operation:

The signal of 48~49 MHz band (48.76~49.99MHz) which is input from ANT is filtered at DUP1, passes through the filter AMP of 49 MHz band at T1 and Q1, and is input to Pins 41 and 42 of IC2.

RX VCO which oscillates at T3 and Pins 44, 45 of IC2 is input to program control at inside of IC2, 1st local frequency is controlled to assigned channel by serial data which is output, from Pins 11, 37 and 38 of IC1 (CPU), makes loop with Phase Detector Out and RX VCO, and locks 1st local frequency.

The input signal of Pin 41 of IC2 and 1st local frequency output from RX VCO are mixed at inside of IC2, then it passes through CF1, and 1st IF frequency of 10.695 MHz is generated. Farther, the 10.240 MHz and 10.695 MHz which are oscillated at X2 and Pins 1, 2 of IC2 are mixed at inside of IC2 and filtered at CF2, and 2nd IF 455 Hz is output.

Circuit Diagram

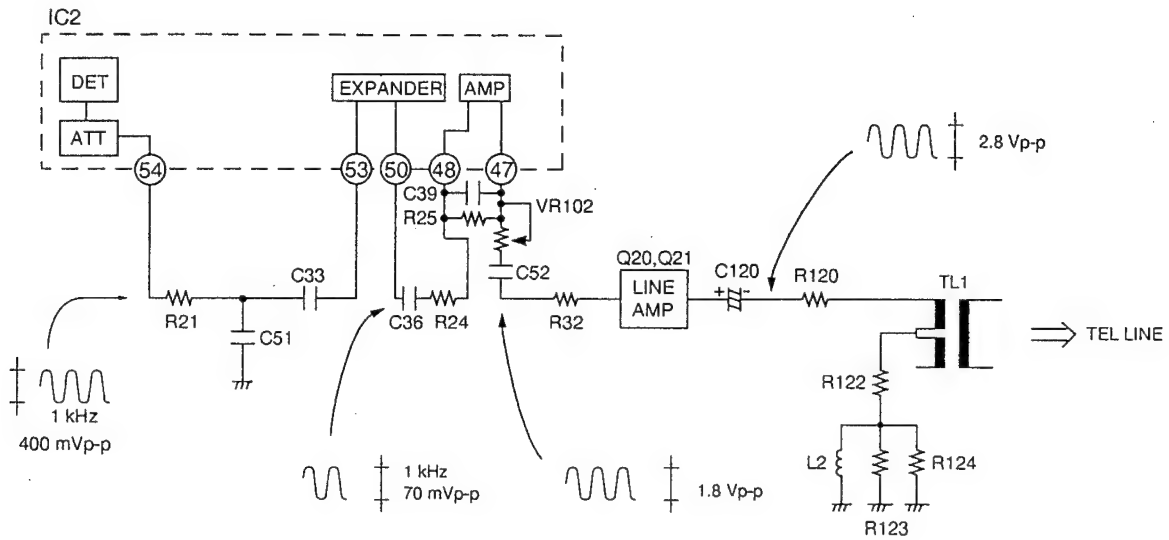

RECEIVER SIGNAL CIRCUIT

Circuit Operation:

1. The detected signal passes through R21, C33, is input to Pin 53 of IC2.
2. Then, it goes through L.P.F. which consists of Pin 53 of IC2 and external capacitor and resistor, and internal EXP/AMP of IC2 and is output from Pin 47 of IC2.
3. Then it goes through Butter Amp which consists of Q20, Q21 and tel line interface trans TL1, and is output to TEL LINE.

Circuit Diagram

Note: When applying the SSG input level of reception 60 dB μ V
(3.0 kHz Deviation, f=1 kHz) from antenna, all waveform are measured.

INITIALIZATION CIRCUIT

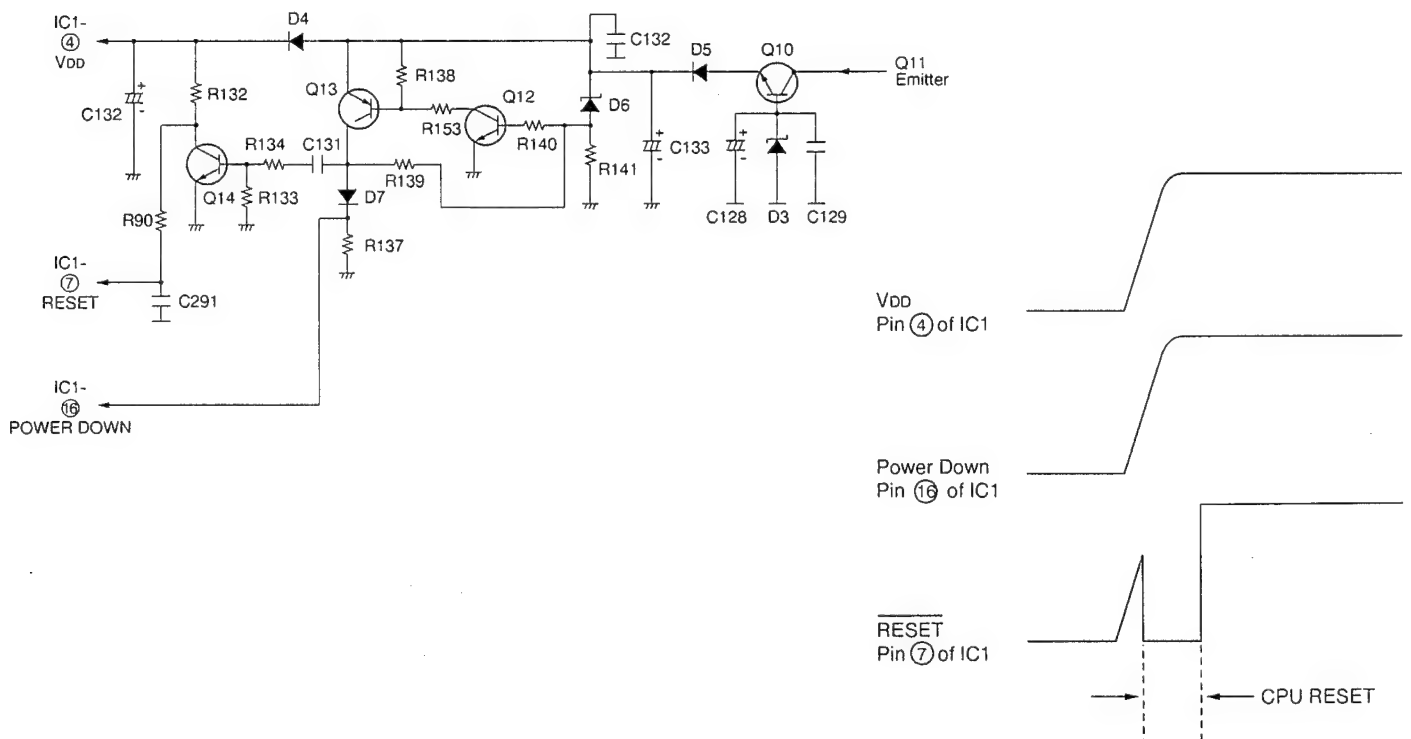

Function:

This circuit is used for initializing the CPU when the AC adaptor is connected.

Circuit Operation:

When the unit is switched ON, then the voltage is shifted by D5, D8 and power is supplied to the CPU.

Circuit Diagram

CHARGE DETECT CIRCUIT

Circuit Operation:

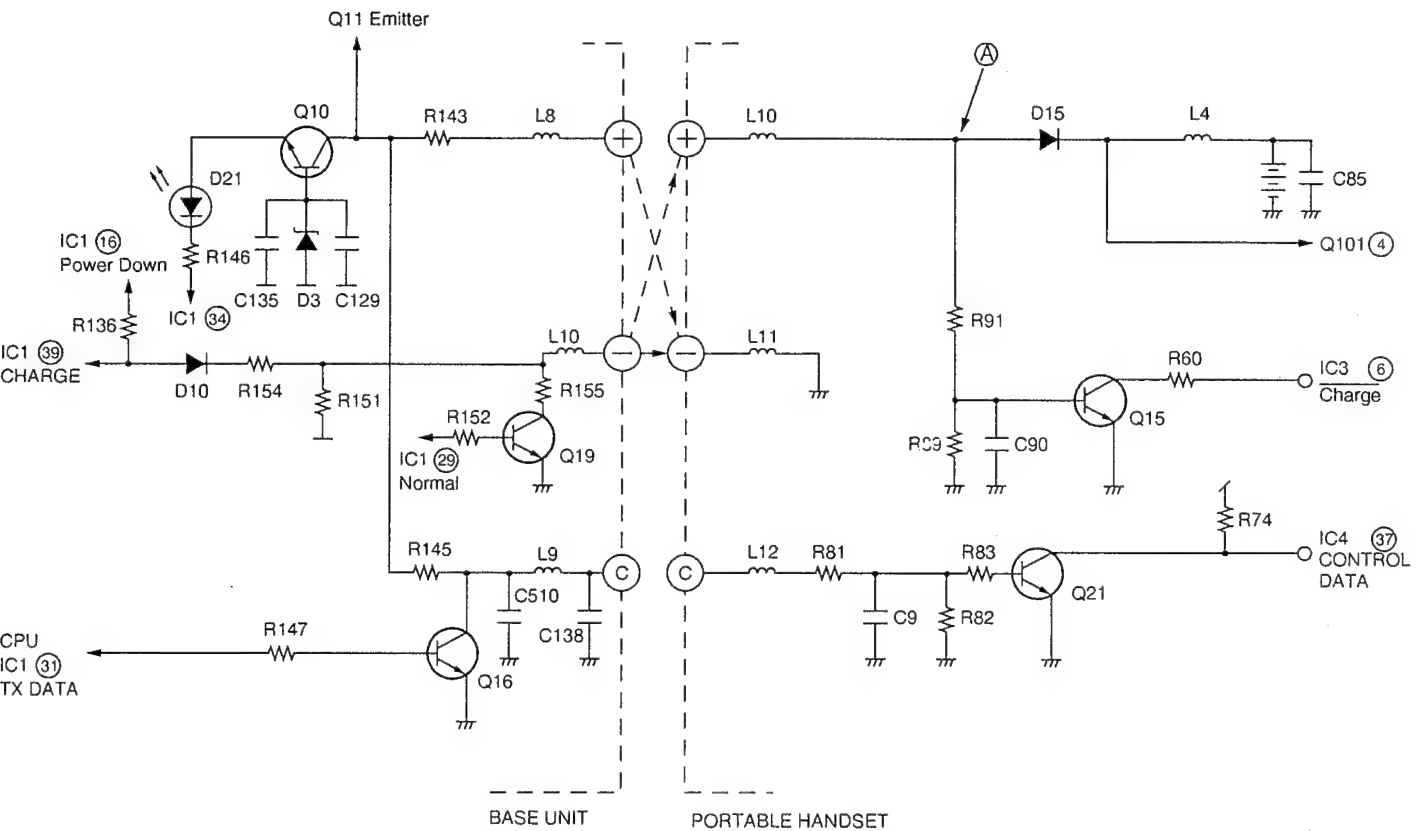

CHARGE MODE

When charging the portable handset on the base unit, CH ID CODES are sent from the CONT terminal to the portable handset, and charging current is supplied to the portable handset from the battery charge contacts via R143, R155 on base unit:
 When  contact on base unit is input to Pin 39 of IC1 (CPU) through D10 and D21 (CHARGE LED) light is on. When the  point on the portable handset is High level, Q15 on portable handset goes on and Pin 6 of IC3 becomes Low, and the pin1 of IC3 will become low, so pin 36 of IC4 (CPU) becomes low. In this way the CPU on portable handset detects the fact that the battery is charged.

Set up of the portable handset

When charging the portable handset on the base unit, the data signal is sent from CONT terminal to portable handset. The Q16 switching is affected by Pin 31 of IC1 on base unit, the sending data are CH data, ID code, tone or pulse mode data etc. The data signal is sent to Pin 37 of IC4 (CPU) via Q21 on portable handset.
 While charging these data continue to be sent, the CPU of portable handset operates independent of whether power switch is turned ON or OFF, and these data are received by the CPU.

Circuit Diagram

KX-TC150-W

■ POWER SUPPLY CIRCUIT

Function:

Power from the AC adaptor passes through a 2-stage regulating block consisting of Q11 and Q10 and provides system voltages of 5.4 and 9 V.

Circuit Operation:

Power from the AC adaptor is supplied directly to the plunger. Q11 is a regulated power supply. The voltage at point (B) is regulated to 9 V by the zener voltage of D4→Amp power. Q10 is a regulated power supply. The voltage at point (C) is regulated to 6 V by the zener voltage of D3. The 6 V voltage is dropped by D16 to 5.4 V.

Circuit Diagram

■ CPU OPERATION

1. TEL MODE

CPU Terminals	30 TX POW	31 TX DATA	41 TR-RLY
Operation Mode			
STANDBY	L	L	H
TALK	H	L	L
150H-W→150R-W Ring	H	DATA	H
150H-W→150R-W Paging	H	DATA	H

2. TIMING OF IC1 (CPU) OUTPUT PORT WITH THE BASE UNIT IN HANDSET LOCATOR MODE

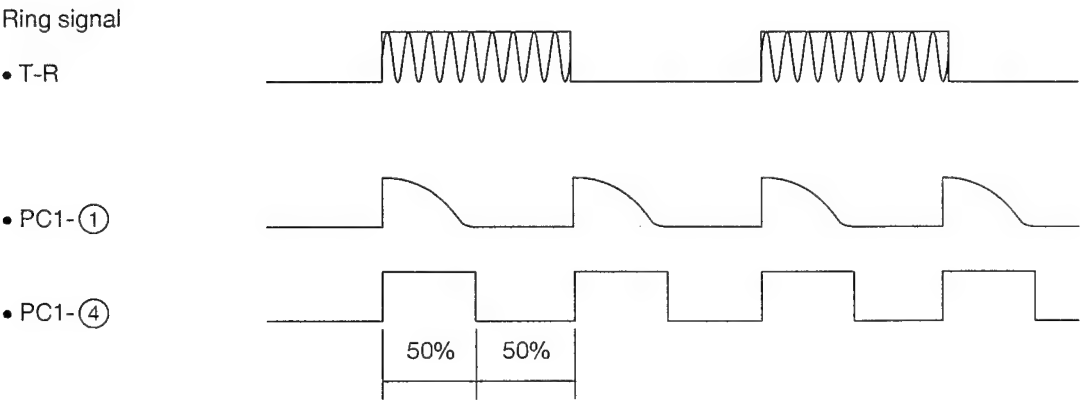

3. WHEN PRESSING THE TALK SWITCH OF THE PORTABLE HANDSET

4. WHEN PRESSING THE TALK SWITCH OF THE PORTABLE HANDSET TO OFF

5. RESONANCE PREVENTION CIRCUIT

Circuit Diagram

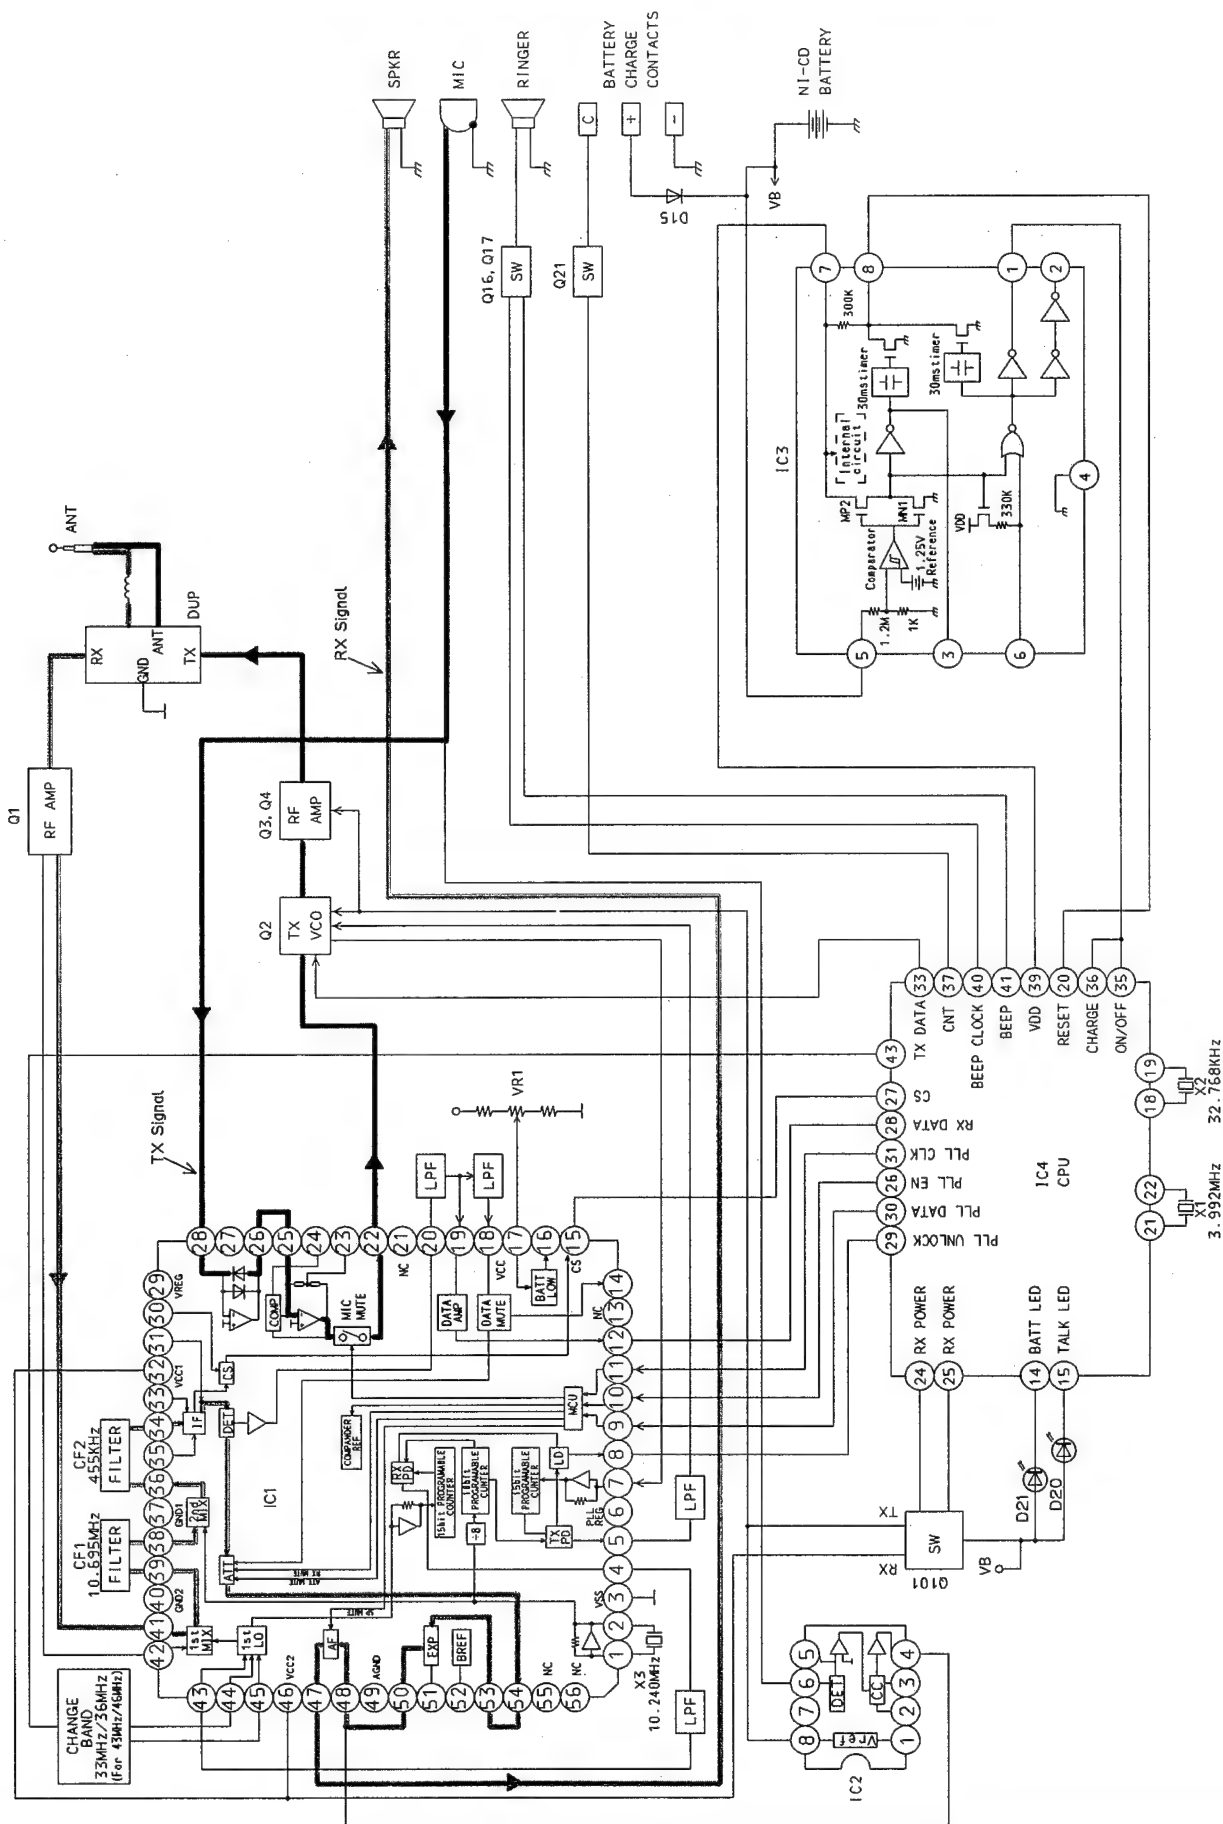

Make/break ratio when dialing with the Portable handset: 40%: 60%
 High/low ratio upon ring signal: 50%: 50%
 Therefore, if the low/high ratio is greater than 45% at IC1- 15 (CPU), it is judged as a ring signal.

6. EXPLANATION OF THE RECEIVE CIRCUIT**6-1. Signal Flow****Circuit Diagram**

In area where the transmission power from the portable handset is extremely weak, noise is superimposed on the data and the chance of an error can become extremely great upon reception of the data. To help prevent this, the above circuit is used.

BLOCK DIAGRAM (KX-TC150R-W)

NEW CIRCUIT OPERATION (KX-TC150R-W)

RECEIVER RF IF CIRCUIT

Circuit Operation:

The signal of 46 MHz band (46.61 MHz~46.97 MHz) which is input from ANT is filtered by DUP1, passes through filtered Amp of 46 MHz band at T1 and Q1, and is input to Pin 41 and Pin 42 of IC1.

The RX VCO which oscillates at T3 and IC1 is locked to 1st Local frequency by PLL inside IC1. (PLL is controlled by serial data output from Pin 26, 30 and 31 of IC4.)

An input signal from Pin 41 and 42 of IC1 and 1st Local frequency output from RX VCO are mixed inside IC1, pass through CF1, and 1st IF frequency of 10.695 MHz is generated.

Further, 10.240 MHz and 10.695 MHz oscillated at X3 pass through MIXER inside IC1 and are filtered at CF2 and output 2nd IF 455 kHz.

Block (A) is the circuit for the RX VCO oscillator frequency selector (CH1~CH15, CH16~CH25).

(1) CH1~CH15: Pin 34 of IC4 becomes high and the frequency band width selector circuit turns on. D4 short-circuits, C120 (7PF) is added through C43 (27PF), and then it oscillates at a 33 MHz band width.

(2) CH16~CH25: Pin 34 of IC4 becomes low and the frequency band width selector circuit turns off. C120 is not added through C43 and it oscillates at a 36 MHz band width.

Block (B) is the circuit for the RF band width selector.

(1) CH1~CH15: Pin 34 of IC4 becomes high and the selector circuit turns on. It is then connected to the LC circuit (T4, C124). The 48 MHz band width (CH1~CH15 TX frequency) is attenuated and passes through the 43~44 MHz band widths.

(2) CH16~CH25: Pin 34 of IC4 becomes low and the selector circuit turns off.

It then passes through the 46 MHz band width.

Circuit Diagram

RECEIVER SIGNAL CIRCUIT

Circuit Operation:

1. ATT, RX MUTE, MIC MUTE, SP MUTE and PLL CONTROL (CH, REFERENCE, COUNTER) are all controlled by serial data output from Pins 26, 30 and 31 of IC4.
2. A detected signal passes through L.P.F. ($f_c=4$ kHz) inside IC1 and is output to Pin 54.
3. Next, it is input to Pin 53 of IC1, passes through EXPANDER→SP AMP, and is output to speaker.

Circuit Diagram

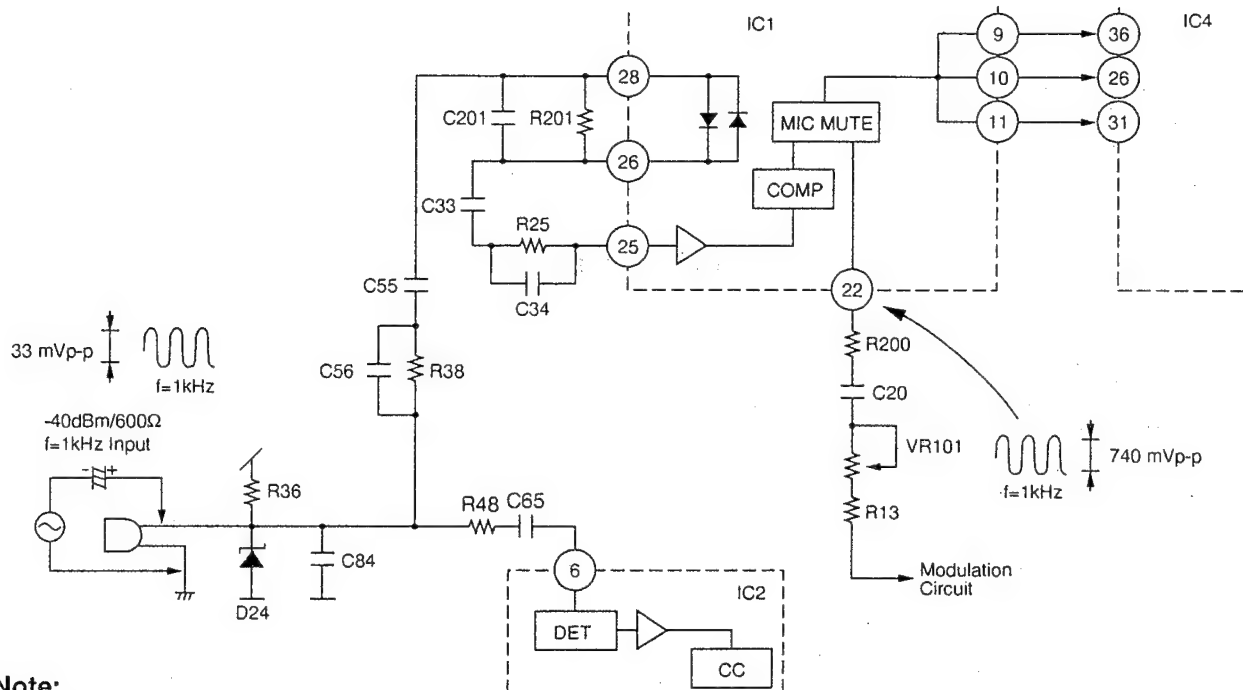

Note: When applying the S.S.G. input level of reception $60 \text{ dB}\mu\text{V}$ (3.0 kHz deviation, $f=1 \text{ kHz}$) from the antenna, all wave form are measured. Volum: High

TRANSMITTER SIGNAL CIRCUIT

Circuit Operation:

1. Input signal from MIC is input to Pin 28 of IC1, passes through Limiter AMP and is output to Pin 26.
2. Next, it passes through C33 and R25 and is input to Pin 25 of IC1, then passes through COMPRESSOR and is output to Pin 22.
3. An output signal from Pin 22 passes through R200 and C20, VR101 and R13, and is input to modulator circuit.

Circuit Diagram

Note:

When measuring the waveform, apply the OSC Signal from microphone. (This value is signal level when input electrically from MIC, and if MIC operates soundly, Bias of DC voltage from R36 will be necessary.)

RECEIVER DATA CONTROL CIRCUIT

Circuit Operation:

The received signal that is output from Pin 20 of IC1 passes through a low pass filter and is input to Pin 19 of IC1 where the waveform is adjusted. The resulting signal is output from Pin 12 and input to Pin 28 of CPU.

Circuit Diagram

BATTERY DETECTOR CIRCUIT

Circuit Operation:

When the battery voltage goes down and the rest of operating time becomes short, the BATT Low/PROG indicator flashes or beeps intermittently.

CPU OPERATION

CPU Terminals Operation Mode	23 TX DATA	25 RX POW	24 TX POW	41 BEEP	15 TALKLED

150R-W OFF MODE	L	H	—	L	H

■ RESET CIRCUIT POWER ON/OFF CIRCUIT

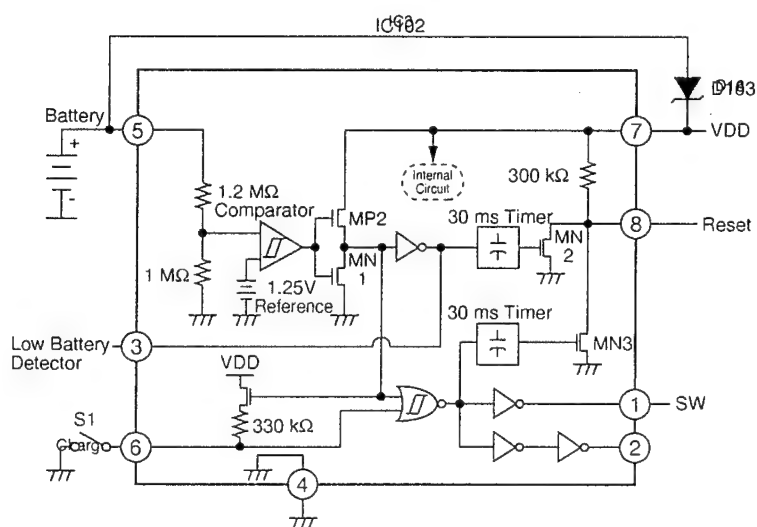

Reset circuit

The reset signal is input to Pin 20 of the CPU by the below circuit.

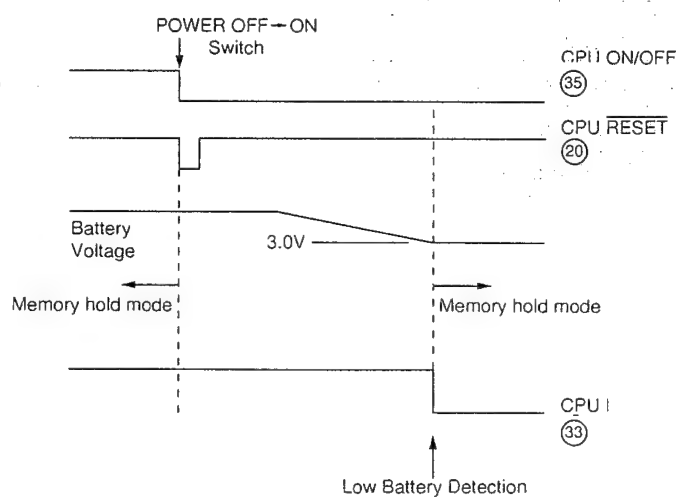

Once the reset signal is input, the CPU starts to operate from the memory hold mode.

(A) The reset signal will be output when voltage of battery is higher than 2.8 V.

Circuit Diagram

Timing Chart

TROUBLESHOOTING GUIDE

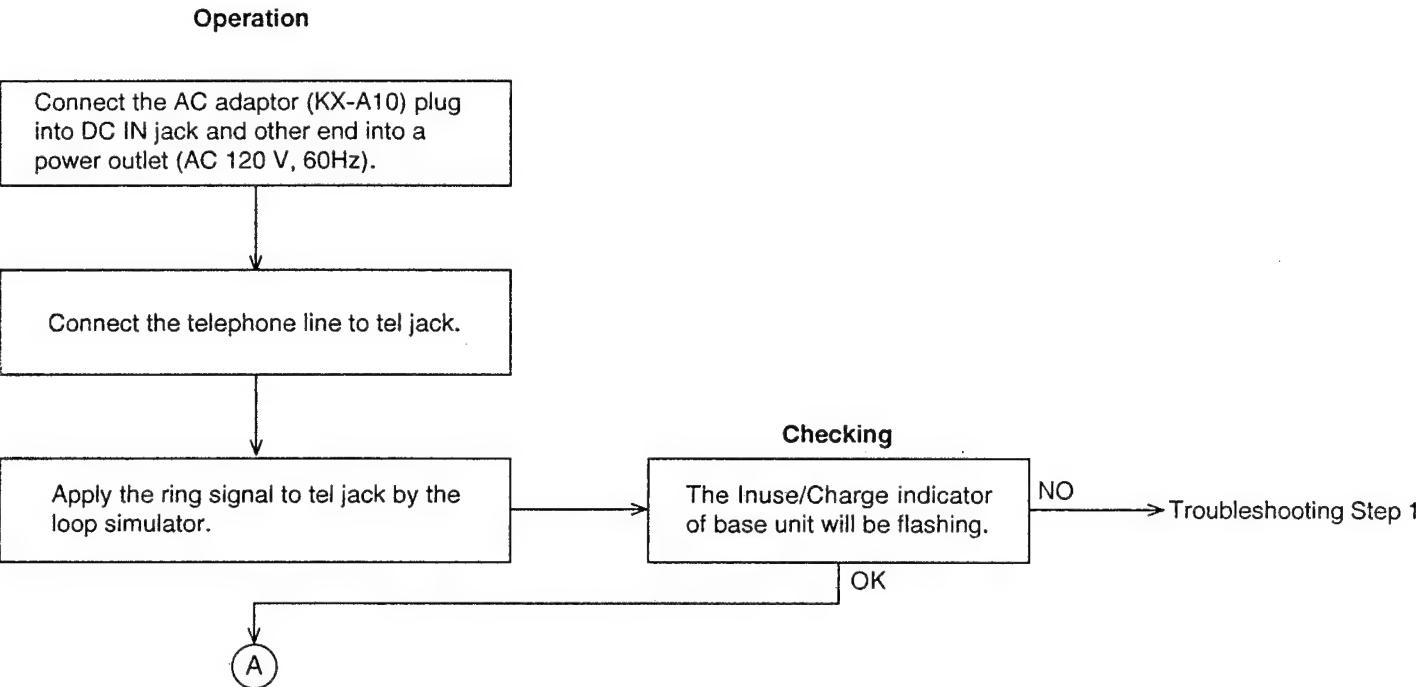

Symptom	Refer to page –.	Unit for repair
The base unit does not respond to a call from portable handset.	11	Base Unit
The base unit does not transmit or the transmit frequency is off.		
The transmit frequency is off.		
The transmit power output is low, and the operating distance between base unit and portable handset is less than normal.		
The reception sensitivity of base unit is low with noise.		
The transmit level is large or small.		
The reception level is large or small.		
The unit does not link.		
The base unit does not ring from the speaker.	54	
The charge indicator does not light.	55	
The IN USE/Charge indicator does not flash.	55	
The beep is not heard from the portable handset.	55	
The movement of Battery Low indicator is wrong.	25	Portable Handset
The base unit does not respond to a call from portable handset.		
The base unit does not transmit or the transmit frequency is off.		
The transmit frequency is off.		
The transmit power output is low, and the operating distance between base unit and portable handset is less than normal.		
The reception sensitivity of base unit is low with noise.		
Does not link between base unit and portable handset.		
The reception level is large or small.		
The reception.		
After power switch is OFF, the portable handset does not become battery save mode.	56	
The beep is not heard from the portable handset.	57	
The TALK indicator does not flash.	57	

TROUBLESHOOTING GUIDE (KX-TC150H-W)

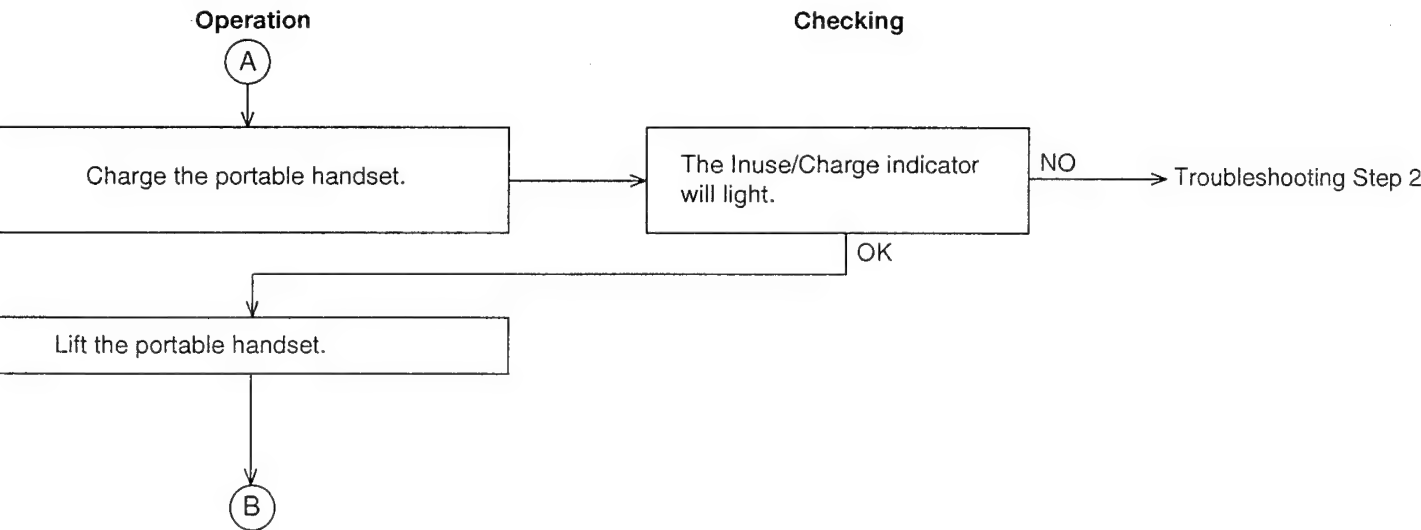

- Base Unit Condition:
- 1. Set the Volume/Ringer button to "MAX".
 - 2. Set the dialing mode selector to "Tone".

When checking the base unit only

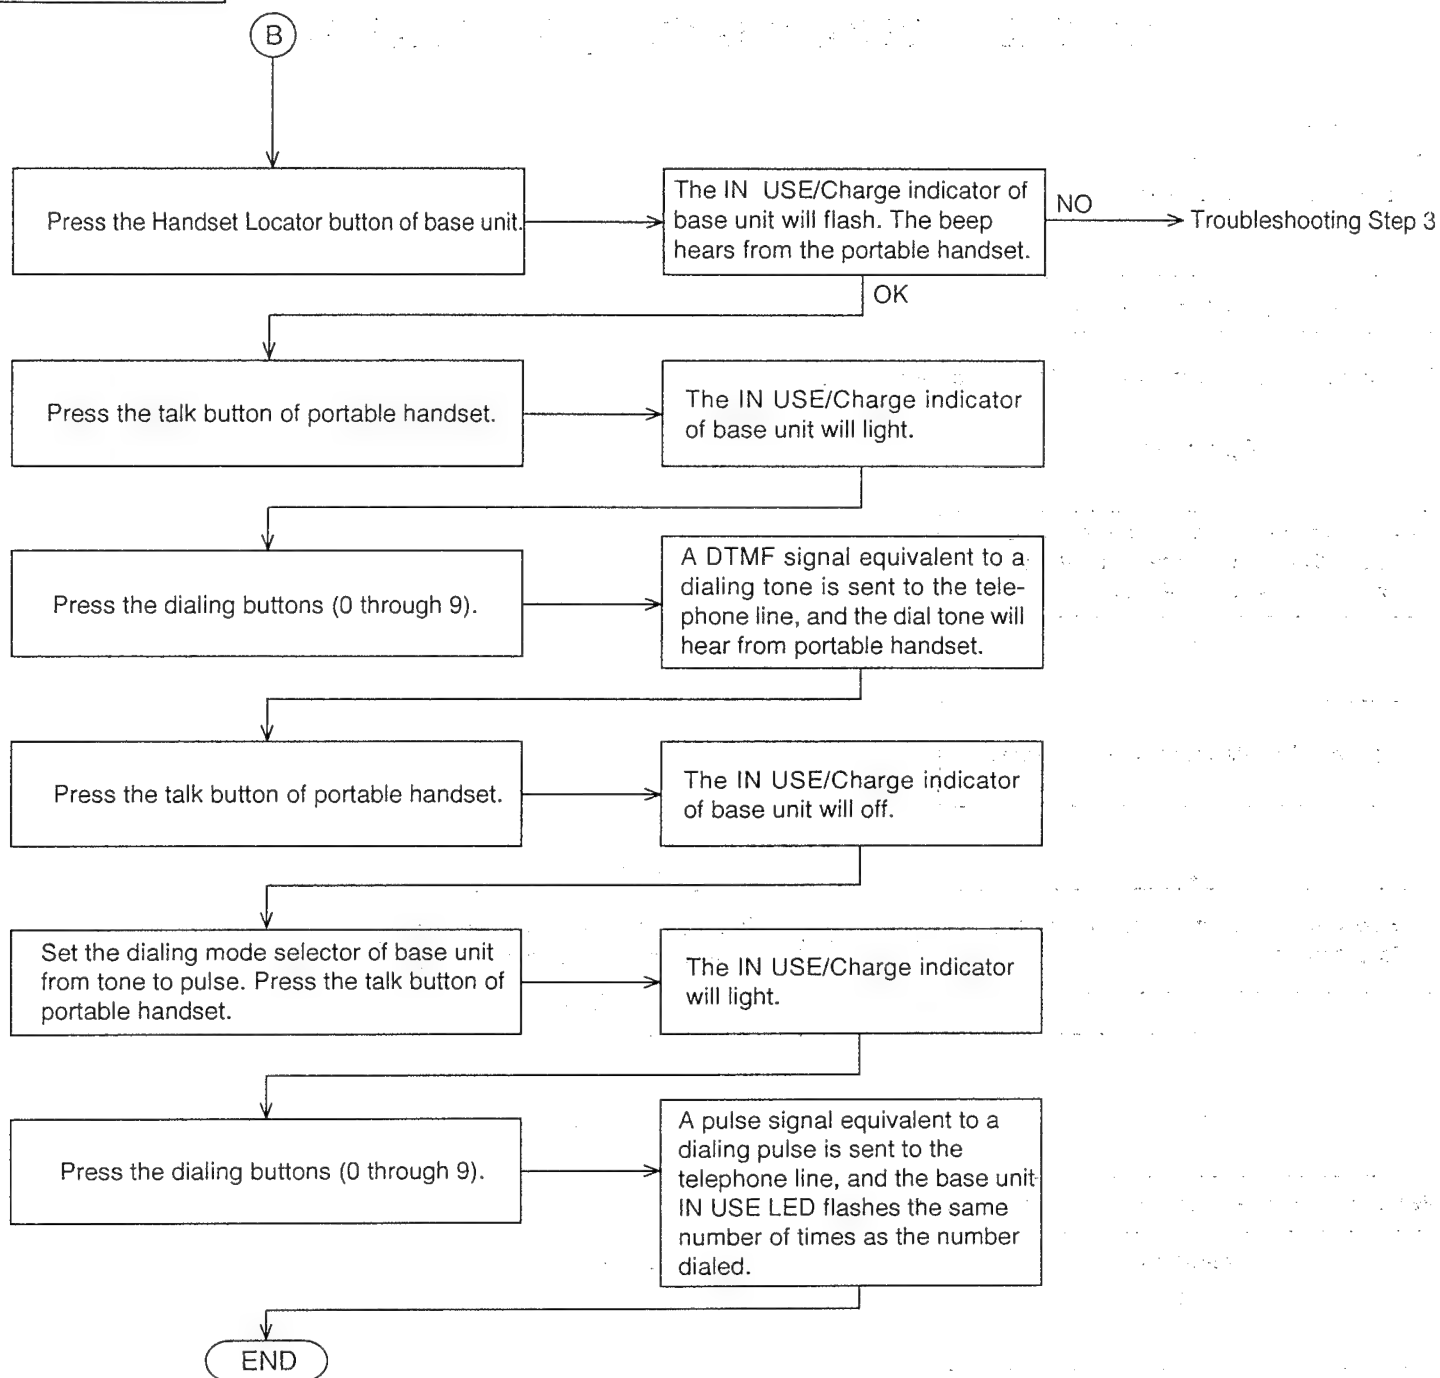

Check the base unit as shown by following below flow chart.

When checking the base unit and portable handset

KX-TC150-W

Troubleshooting Step 1:

The base unit does not flash In Use/Charge indicator.

Check the ring detector circuit.

Check Point

① Pin 4 of PC 1 output voltage.

Check IC1 (CPU).

Check Point

① Pin 15 of IC1 ring input voltage.

Troubleshooting Step 2: The charge indicator does not light.

Check the charge detector circuit.

Check D21.

- Check Point**
① Is the ⊖ contact of base unit is low logic level?

Troubleshooting Step 3:

1) The INUSE/CHARGE indicator does not flash.

Check IC1(CPU).

Check D21.

- Check Point**
1 Is the pin 34 of IC1 (INUSE/Charge output) at a low logic level?

2) The beep is not heard from the portable handset.

Check the data transmission during charge mode.

Check the modulation circuit(D2).

Check the oscillation circuit.

Check the transmitter amplifier.

- Check Points**
① Pin 31 of IC 1 data output voltage.
② Collector of Q16 output voltage.

- Check Point**
① Is the base of Q5 (TX VCO) 4 V?
② Is the Pin 5 of IC2 3.2 V?
③ Are the Pins 11, 37 ,38 of IC1 (PLL control)?

- Check Point**
① Is the base of Q4 (Final power amplifier) 2 V?

TROUBLESHOOTING GUIDE (KX-TC150R-W)

Use the right base unit for this troubleshooting.

Charge the battery of the portable handset by the base unit.

Base unit condition:

1. Connect the AC Adaptor (KX-A10) plug into DC IN jack and the other end into a power outlet (AC 120 V, 60Hz).
2. Connect the loop simulator (DC 48 V) to tel jack.

Check the portable handset as shown by following below flow chart.

Troubleshooting Step 1: After stand-by mode, the portable handset does not becomes the battery save mode.

Check point

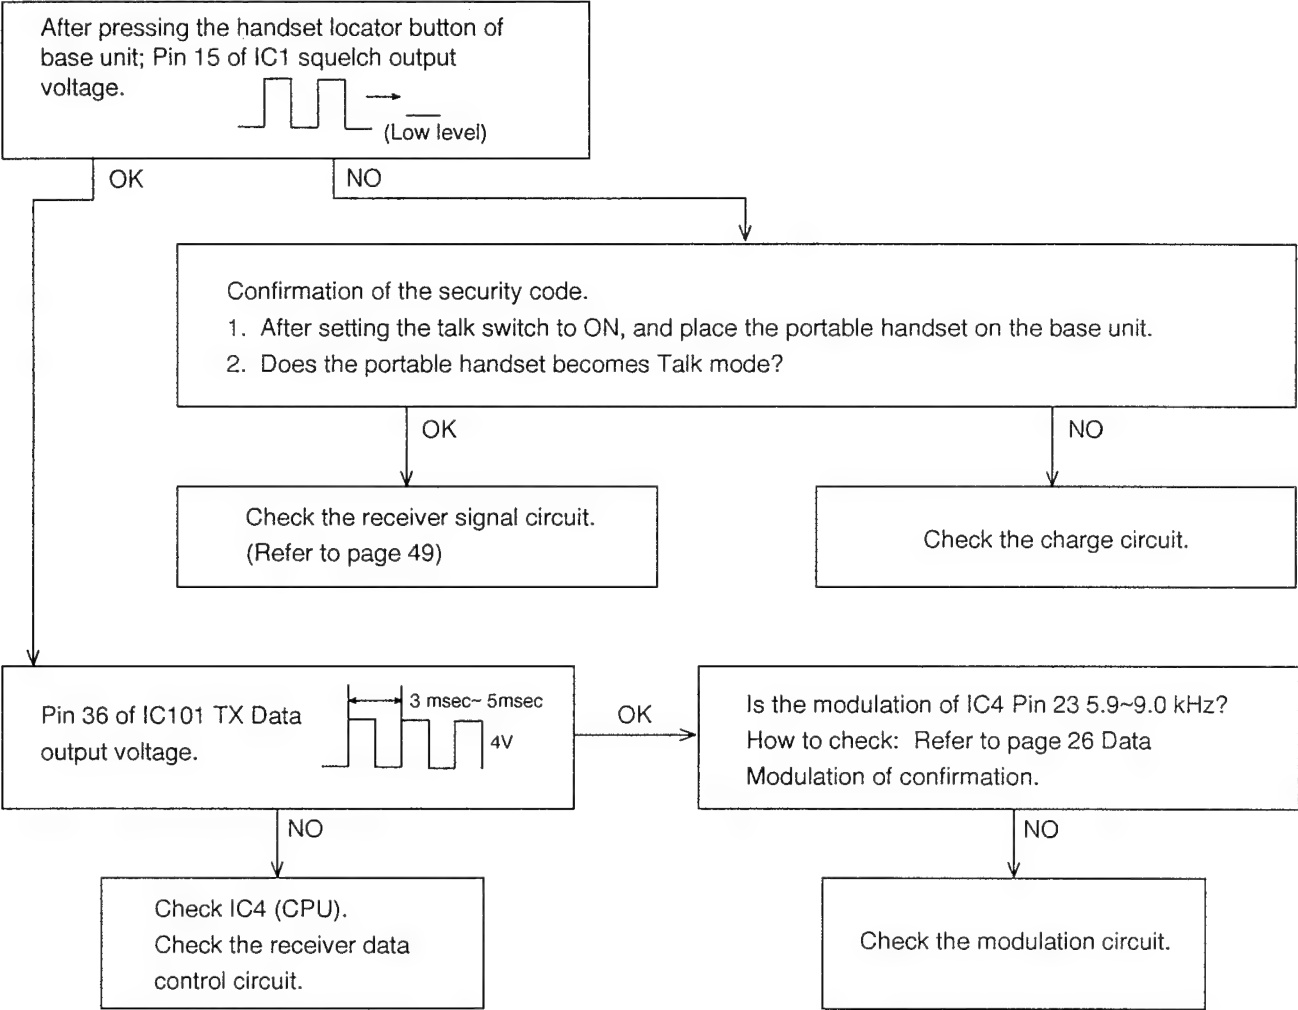

(1) Pin 25 of IC 4

RX power output voltage

Troubleshooting Step 2: The beep is not heard from the portable handset.

Check Points

Troubleshooting Step 3: The TALK indicator does not flash (Check the data reception).

Check Point

Check the signal level of receiver data control circuit on page 50.

ACCESSORIES AND PACKING MATERIALS

This replacement parts list is U. S. A. version only. Refer to the simplified manual (cover) for Canada or other aresa.

REPLACEMENT PARTS LIST

Model KX-TC150H-W

1. RTL (Retention Time Limited)

Note: The marking (RTL) indicates that the Retention Time is limited for this item.

After the discontinuation of this assembly in production, the item will continue to be available for a specific period of time. The retention period of availability is dependent on the type of assembly, and in accordance with the laws governing part and product retention. After the end of this period, the assembly will no longer be available.

2. Important safety notice

Components identified by the Δ mark special characteristics important for safety. When replacing any of these components, use only manufacturer's specified parts.

3. The S mark indicates service standard parts and may differ from production parts.

4. RESISTORS & CAPACITORS

Unless otherwise specified.

All resistors are in ohms (Ω) K=1000 Ω , M=1000K Ω

All capacitors are in MICRO FARADS (μ F) P= μ F

*Type & Wattage of Resistor

This replacement parts list is U. S. A. version only. Refer to the simplified manual (cover) for Canada or other aresa.

REPLACEMENT PARTS LIST

Model KX-TC150R-W

1. RTL (Retention Time Limited)

Note: The marking (RTL) indicates that the Retention Time is limited for this item.

After the discontinuation of this assembly in production, the item will continue to be available for a specific period of time. The retention period of availability depends on the type of assembly and the laws governing parts and product retention. At the end of this period, the assembly will no longer be available.

2. Important safety notice

Components identified by the Δ mark indicates special characteristics important for safety. When replacing any of these components, only use specified manufacturer's parts.

3. The S mark indicates service standard parts and may differ from production parts.

4. RESISTORS & CAPACITORS

Unless otherwise specified;

All resistors are in ohms (Ω) K=1000 Ω , M=1000K Ω

All capacitors are in MICRO FARADS (μ F) P= μ F

*Type & Wattage of Resistor

Type

ERC:Solid	ERX:Metal Film	PQ4R:Carbon
ERD:Carbon	ERG:Metal Oxide	ERS:Fusible Resistor
PQRD:Carbon	ER0:Metal Film	ERF:Cement Resistor

Wattage

10,16:1/8W	14,25:1/4W	12:1/2W	1:1W	2:2W	3:3W
------------	------------	---------	------	------	------
